DAVIS PLASTIC SURGERY

BEST WAY TO MAXIMIZE RESULTS:

Injectables such as BOTOX® and dermal fillers such as Juvederm® can be extremely effective, producing immediate results that last for months. But to maximize those results, it's essential to start with healthy skin. And healthy skin, with good tone and texture that is cleansed and hydrated, makes the biggest difference.

BEST TREATMENT TO GET STARTED: According to Slutsky, Fraxel® laser treatment is the ultimate and can remove years from your appearance. It can help with acne scars, sun damage and wrinkles on the face as well as texturing on the neck. By stimulating the collagen in skin, Fraxel® lays the foundation so anything else done after or put on top can be more effective. Think of it as aerating your lawn in order to promote future growth. For most people, Slutsky recommends two treatments within a two-month period, and then two more treatments six months later, allowing the collagen time to start building.

BOTTOM LINE: When evaluating treatments, make sure the person you'll be working with has lots of experience. Experience makes it possible to understand the numerous variances in skin, including the impact of hormones and loss of elasticity. And remember, having a few crinkles is absolutely normal; it's the overall glow of healthy skin that can elevate your look.
